Resident Management System Billing

Billing, part of the RMS Financial System, is fully integrated with features from other RMS modules. It is nursing home specific and supports five billing categories—Medicaid, Medicare, Private, Patient Participation (NAMI) and Third Party insurances. We support the new 5010 format.

All normal transactions within the billing module are fully automated using census data. The resident census is brought into the billing module. From there you can run reports and edit data to assure accuracy.

Automatic accumulation of charges for a user-defined billing period calculates room charges, contractual write-offs, patient resource liability from Medicaid to private pay, charges to be split among insurers, and Medicare Part B. The accumulated charges may be deleted or edited with the option to create additional charges.

If you are using Resident Scheduling , the lines for occupational therapy, physical therapy, and speech therapy automatically are created for UB-04 A Claim data and B Claim data. Also interfaces with several therapy and lab organizations for ancillary billing.

Electronic submission is supported for both Medicare and Medicaid claims along with the UB-04 paper form. You may print private pay statements that you configure to your facility needs. There is a separate line item for the cash assessment add-on for Private Pay residents.

General Features:

- Fully compliant with HIPAA for electronic files.
- Complete support of PPS - interactive with the MDS and therapy data.
- Supports five billing categories: Medicaid, Medicare, Private, Patient Participation (NAMI) and Third Party Insurance (TPHI).
- All normal transactions in the Billing Module are fully automated using census data.
- Totally batch-oriented transaction system with approval at each step.
- Link to P&NP's General Ledger with GAAP accounting controls. Third Party GL's can use a posting report.
- Pulls vital data directly from General Census (ADT Census). Census data can be edited and then frozen for billing purposes without affecting the ADT Census. Produces valuable census reports.
- Automatically accumulates Medicaid, Medicare, private, and TPHI revenues and adjusts Medicare A/R for RUGs III category from MDS module.
- Automatically creates OT, PT, ST, and RT lines for UB-04 A Claim data and B Claim data if the Clinical Scheduling module is also used.
- Prints exact facsimile of the Medicare UB-04 form on plain paper for facility records and TPHI billing.
- Private billing can be prospective with user configured private pay bills.
- Your facility configures the transaction types and determines the billing cycle.
- Electronic Medicaid and Medicare file submission. Also electronic read of the 835, 999, and 277CA reports.
- Tracks NAMI (patient contribution) amounts, produces a bill or pre-bill if needed, and reports on outstanding NAMI balances.
